High resolution key profile cutting machine

CDM-109

I don't have the blank key, so I can't do it :(
This is not a valid reason anymore with X-Cut. Do you want a mini key factory in your workplace?

You can produce a new blank key and copy your customer's key even if it is not in your stock with X-Cut. Besides that you can complete this copying process in a few minutes.

1

■ Clamp a key easily with three different clamping positions on the X-Cut's reading vice.

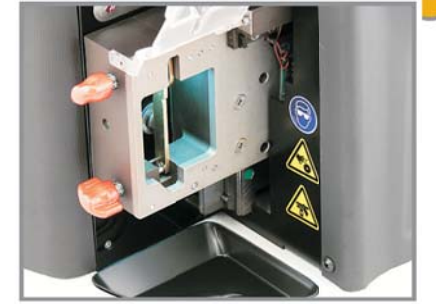

■ Right time, high performance... X-Cut has 4 separate axes that reading and cutting axes move individually, during processes the related axis moves only; therefore axis working lifetime is doubled.

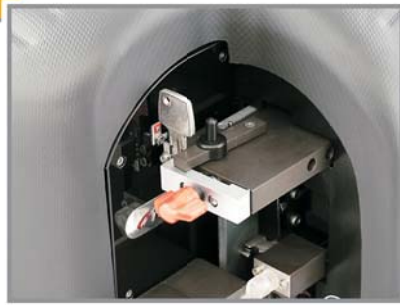

■ The user interface of the X-Cut is designed for easy use and quick processes with integrated graphical lcd and capacitive touch buttons. The interface that named as "Step by Step" is user friendly and designed to prevent possible user mistakes.

■ After clamping the requested blank key and your confirmation, X-Cut will close the protective shield automatically and checks clamped key accuracy and dimensions physically.

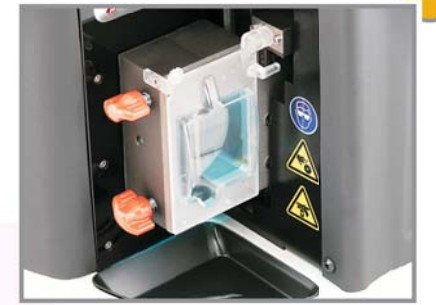

2

■ After clamping the key, select the key type and choose copying process type according to key's profile structure. There are two different copying processes which are quick copy and detailed copy.

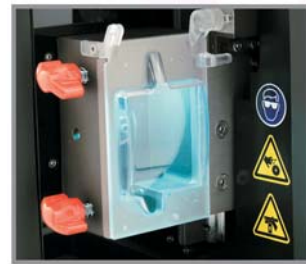

■ Cutting process will take about 5-10 minutes according to key's profile structure and your copying details selections.

3

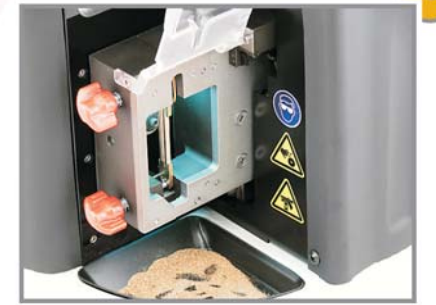

■ Reading process takes about 1 minute. The both sides of the keys are being read at the same time, therefore the time gained from this feature and nano-tech reading probes we are able to get a higher resolution scanning in same period.

■ X-Cut has a strong and stable motor for cutting highly sensitive profiles. The cutter has an improved structure that maximizes the number of total copy and the surface quality of cut key. The cutting area is illuminated by nature-friendly led technology.

■ The shavings, which are generated during cutting, will be fallen into shavings container that is placed under cutting area. Therefore you will have cleaner working area which is also so significant for machine to work properly.

4

■ After completing reading, cutting clamp will have position and the protective shield will open automatically to clamp the blank key which is determined by the machine according to scanned key. Also the clamping/cutting area is illuminated by LED lamp.

■ After cutting the tip of the cut key, you can complete your copying with the key cutting machines in your shop.

5

■ There are two different types of the blank keys in 4 different thicknesses. Referring your selection about key type in the beginning, X-Cut informs you on the screen about the code of the suitable blank key, which is calculated with scanned data, and waits for clamping.

■ No more blank key troubles... Have happy costumers with X-Cut by getting professional solutions to your blank key needs in several steps and short time.

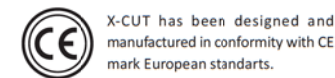

Technical Specifications	
Motor	: DC 55w
Revolution	: 3000 rpm.
Power	: 240V 50Hz *
Energy cons.	: 150W
Cutter	: 20 x 0,3 x 5mm
Illumination	: 3W Led
Control	: Cap.touch
Screen	: Graphic Lcd
Dimensions	: 41x42x45 cm
Weight	: 15 kg

* Some models are produced for the areas that use 110V , the current used for these areas is 110V and the frequency value is 60 Hz.
